floor crossing $q = 2$ ($\sigma^2 > F$ above)
optimal envelope $q_\star(\nu)$, where $\mathcal{V}_\star = q_\star$
boundary $R^2_{\mathrm{rel}} = 0.5$
boundary $R^2_{\mathrm{rel}} = 1$
boundary $R^2_{\mathrm{rel}} = 2$
envelope touch $(\nu_R, R^2_{\mathrm{rel}})$
$q = G/(F\Pi)$
$\nu = 2\Sigma\Pi/\lambda^2$
