(a) any curve above the envelope is realizable
stationary variance σ^2
precision Π
forbidden: $v < \sigma^2_\star(\Pi)$
envelope $\sigma^2_\star(\Pi)$
constructed curve (3 windows)
F
$R^2 = 1.25F$
(b) every curve fails on $(0, \pi_R)$ when $R^2 < F$
$\sigma^2_\star(\Pi)$
precision Π
envelope $\sigma^2_\star$
$R^2 = 0.9F$
forced lower ray $(0, \pi_R)$, $\pi_R = 24.7$
