absolute tolerance: σ^2 (every family monotone)
Σ-independent gain, $G = 1$
Σ-tracking, over-trust $\rho = 10$
optimal
$u = 2\Sigma\Pi/\lambda^2$ ($\lambda = \Pi = 1$)
relative tolerance: σ^2/F (windows return iff $\rho > 2$)
Σ-independent gain, $G = 1$
Σ-tracking, over-trust $\rho = 10$
optimal
$u = 2\Sigma\Pi/\lambda^2$ ($\lambda = \Pi = 1$)
